The Farley Advantage

Remote Ballast Cabinets

For a small premium on the lighting purchase, our clients save big on field wiring costs and operational convenience.

Picture your field or courts with 2 - 85lb metal boxes lying below each light stand, and heavy gauge cables feeding them.

Now picture your field totally clear of ballasts. Nothing to trip over, so your liability is reduced, and nothing to move and store with seasonal structures. The gauge of wire to feed your field lighting (the major use of wiring on site) is reduced and the lighting breaker panel plus switching contactors are all included in the ballast box.

Our weatherproof ballast boxes measure approximately 5' wide x 6' high by 12" deep, and accommodate 20 to 28 ballasts.

Standing inconspicuously beside your furnace or against a clubhouse they make maintenance a breeze. No need to replace 2 ballasts and 2 capacitors when only one fails, and individual components are readily available.

With the **Farley Team** you know you're getting the best!

Electrical Ballast Box

5' wide x 6' high x 1' deep - accommodating 20 to 28 ballasts each
208 Volt, 3 Phase, 100 Amp Panel
